THE FUTURE

Four stories to predict a Possible Future

Four stories | Moore's law

1965

Moore law

Gordon Moore, states that the number of transistors in an integrated circuit doubles approximately every two years. This exponential growth has led to significant increases in computing power and has been a driving force behind technological advancements.

If the first step is 1 meter and apply Moore's law to all subsequent steps.

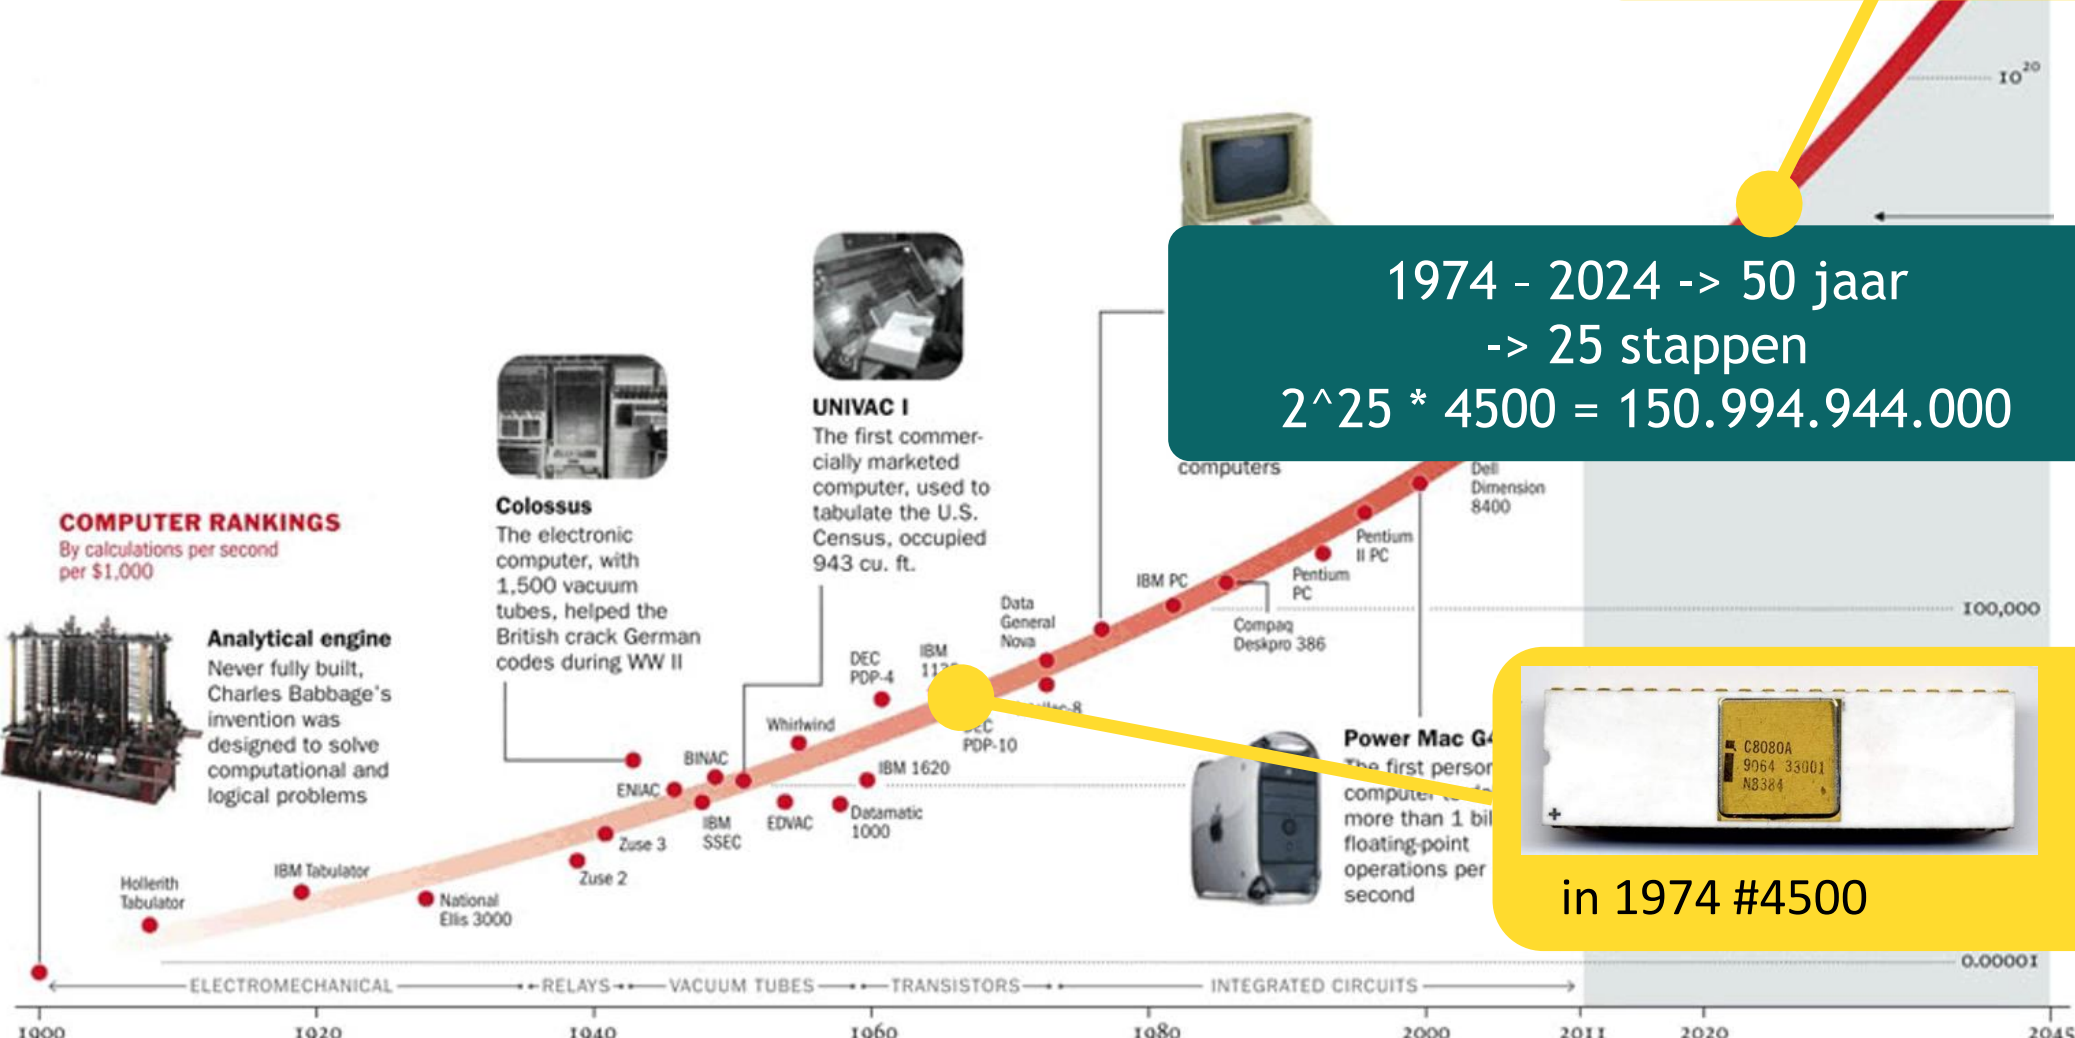

How many steps does it take to walk around the earth?

Four stories | Moore's law

2022

ChatGPT4

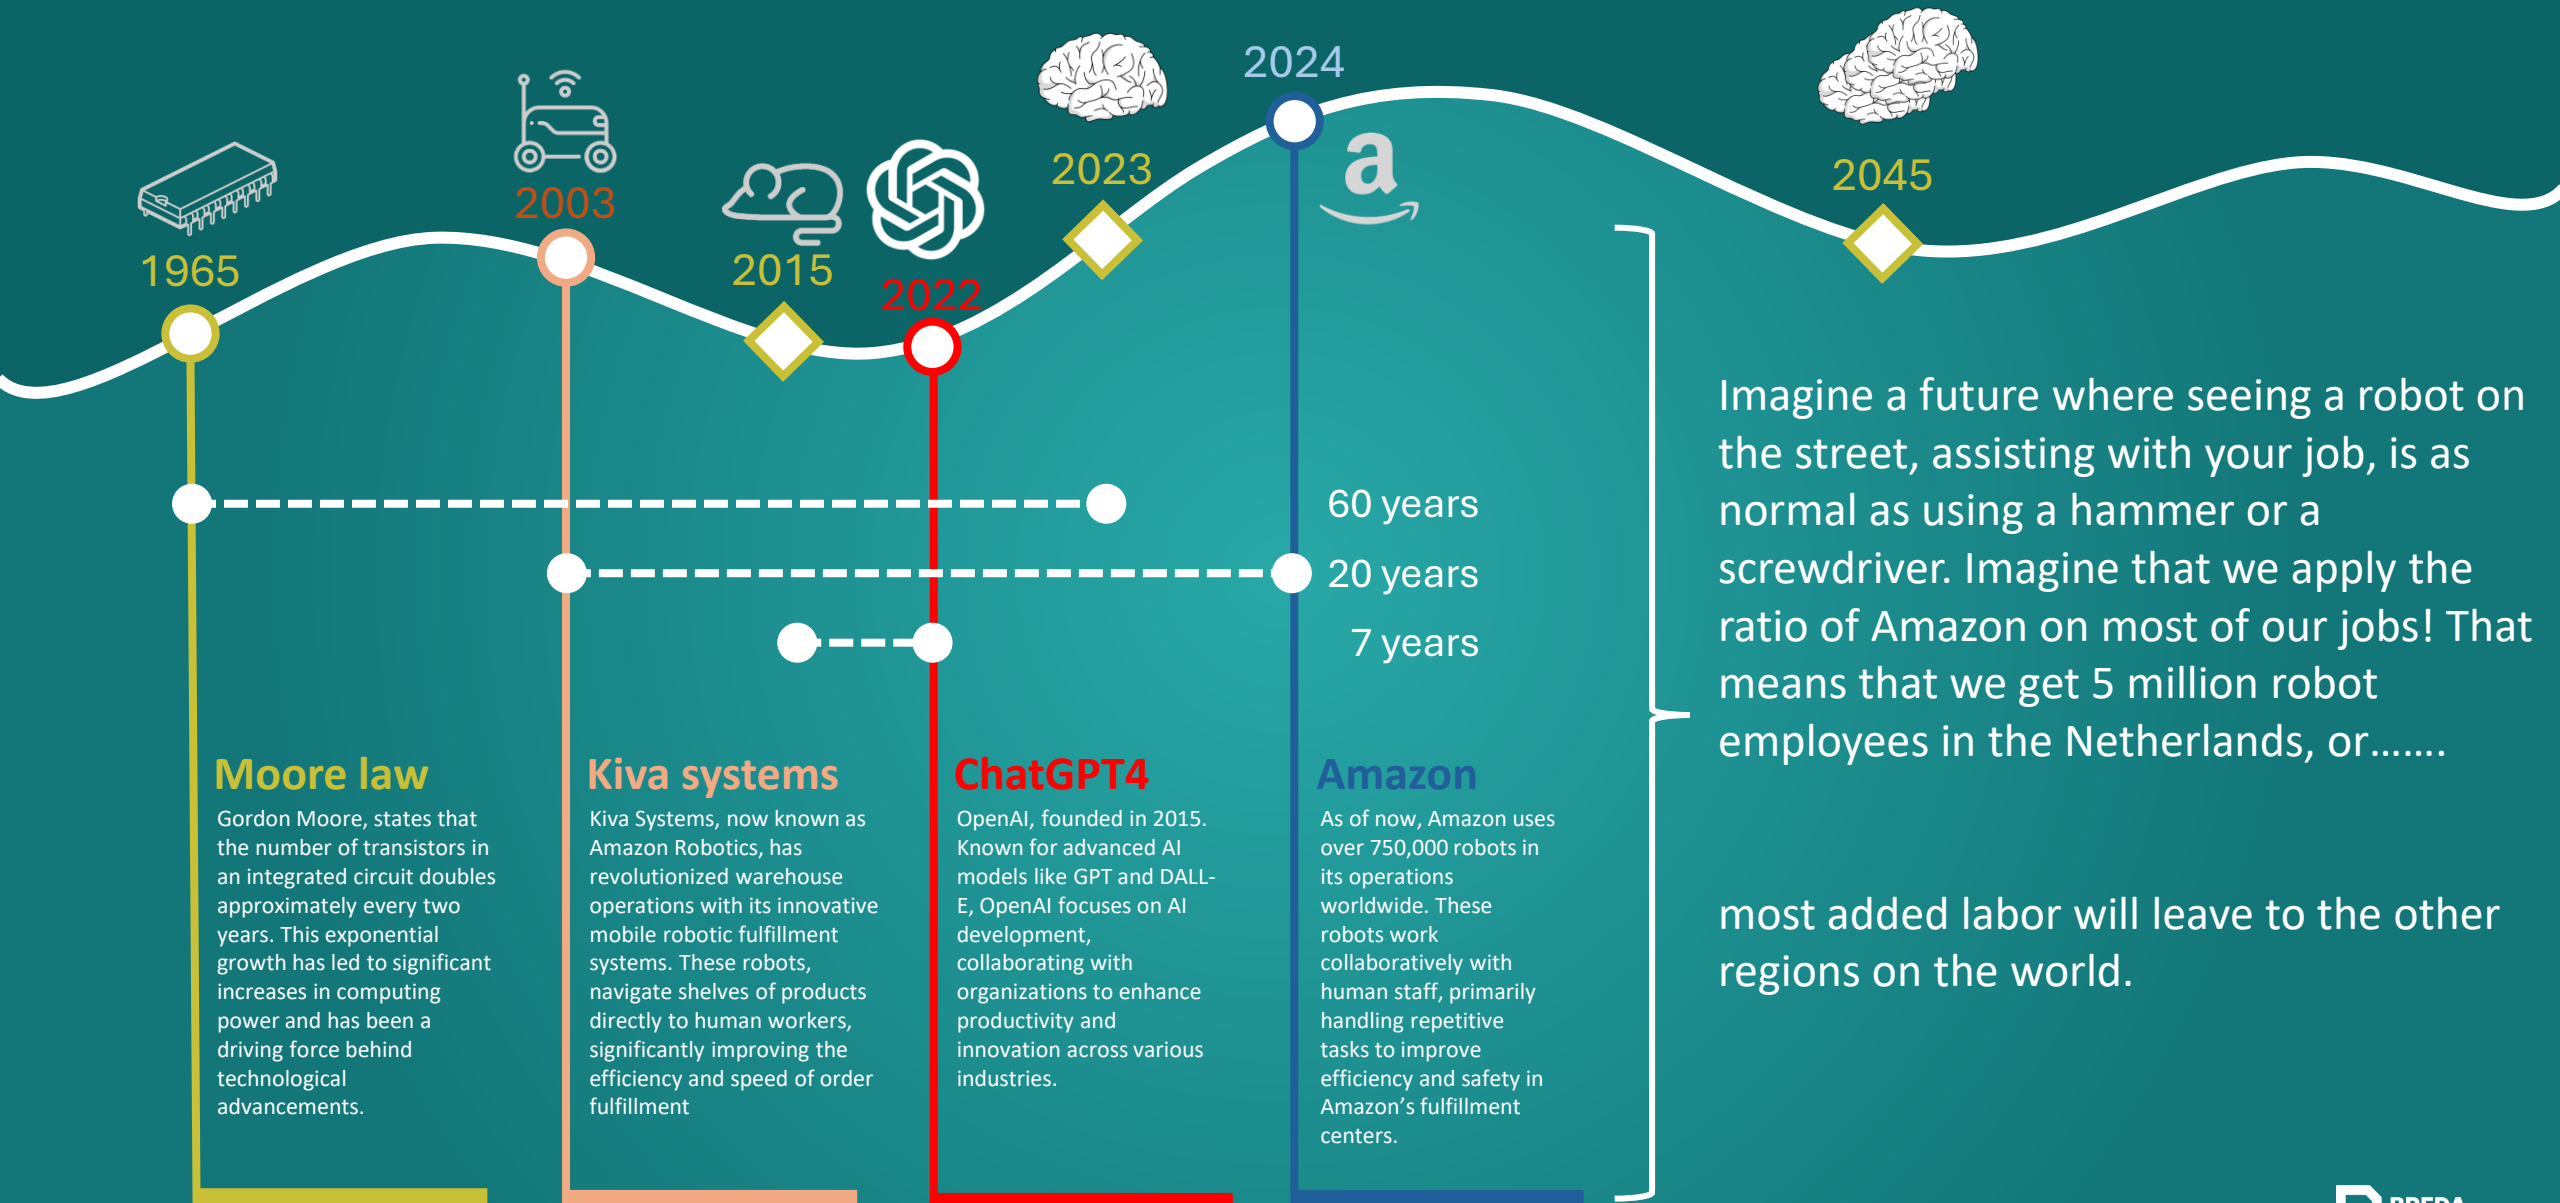

OpenAI, founded in 2015. Known for advanced AI models like GPT and DALL-E, OpenAI focuses on AI development, collaborating with organizations to enhance productivity and innovation across various industries.

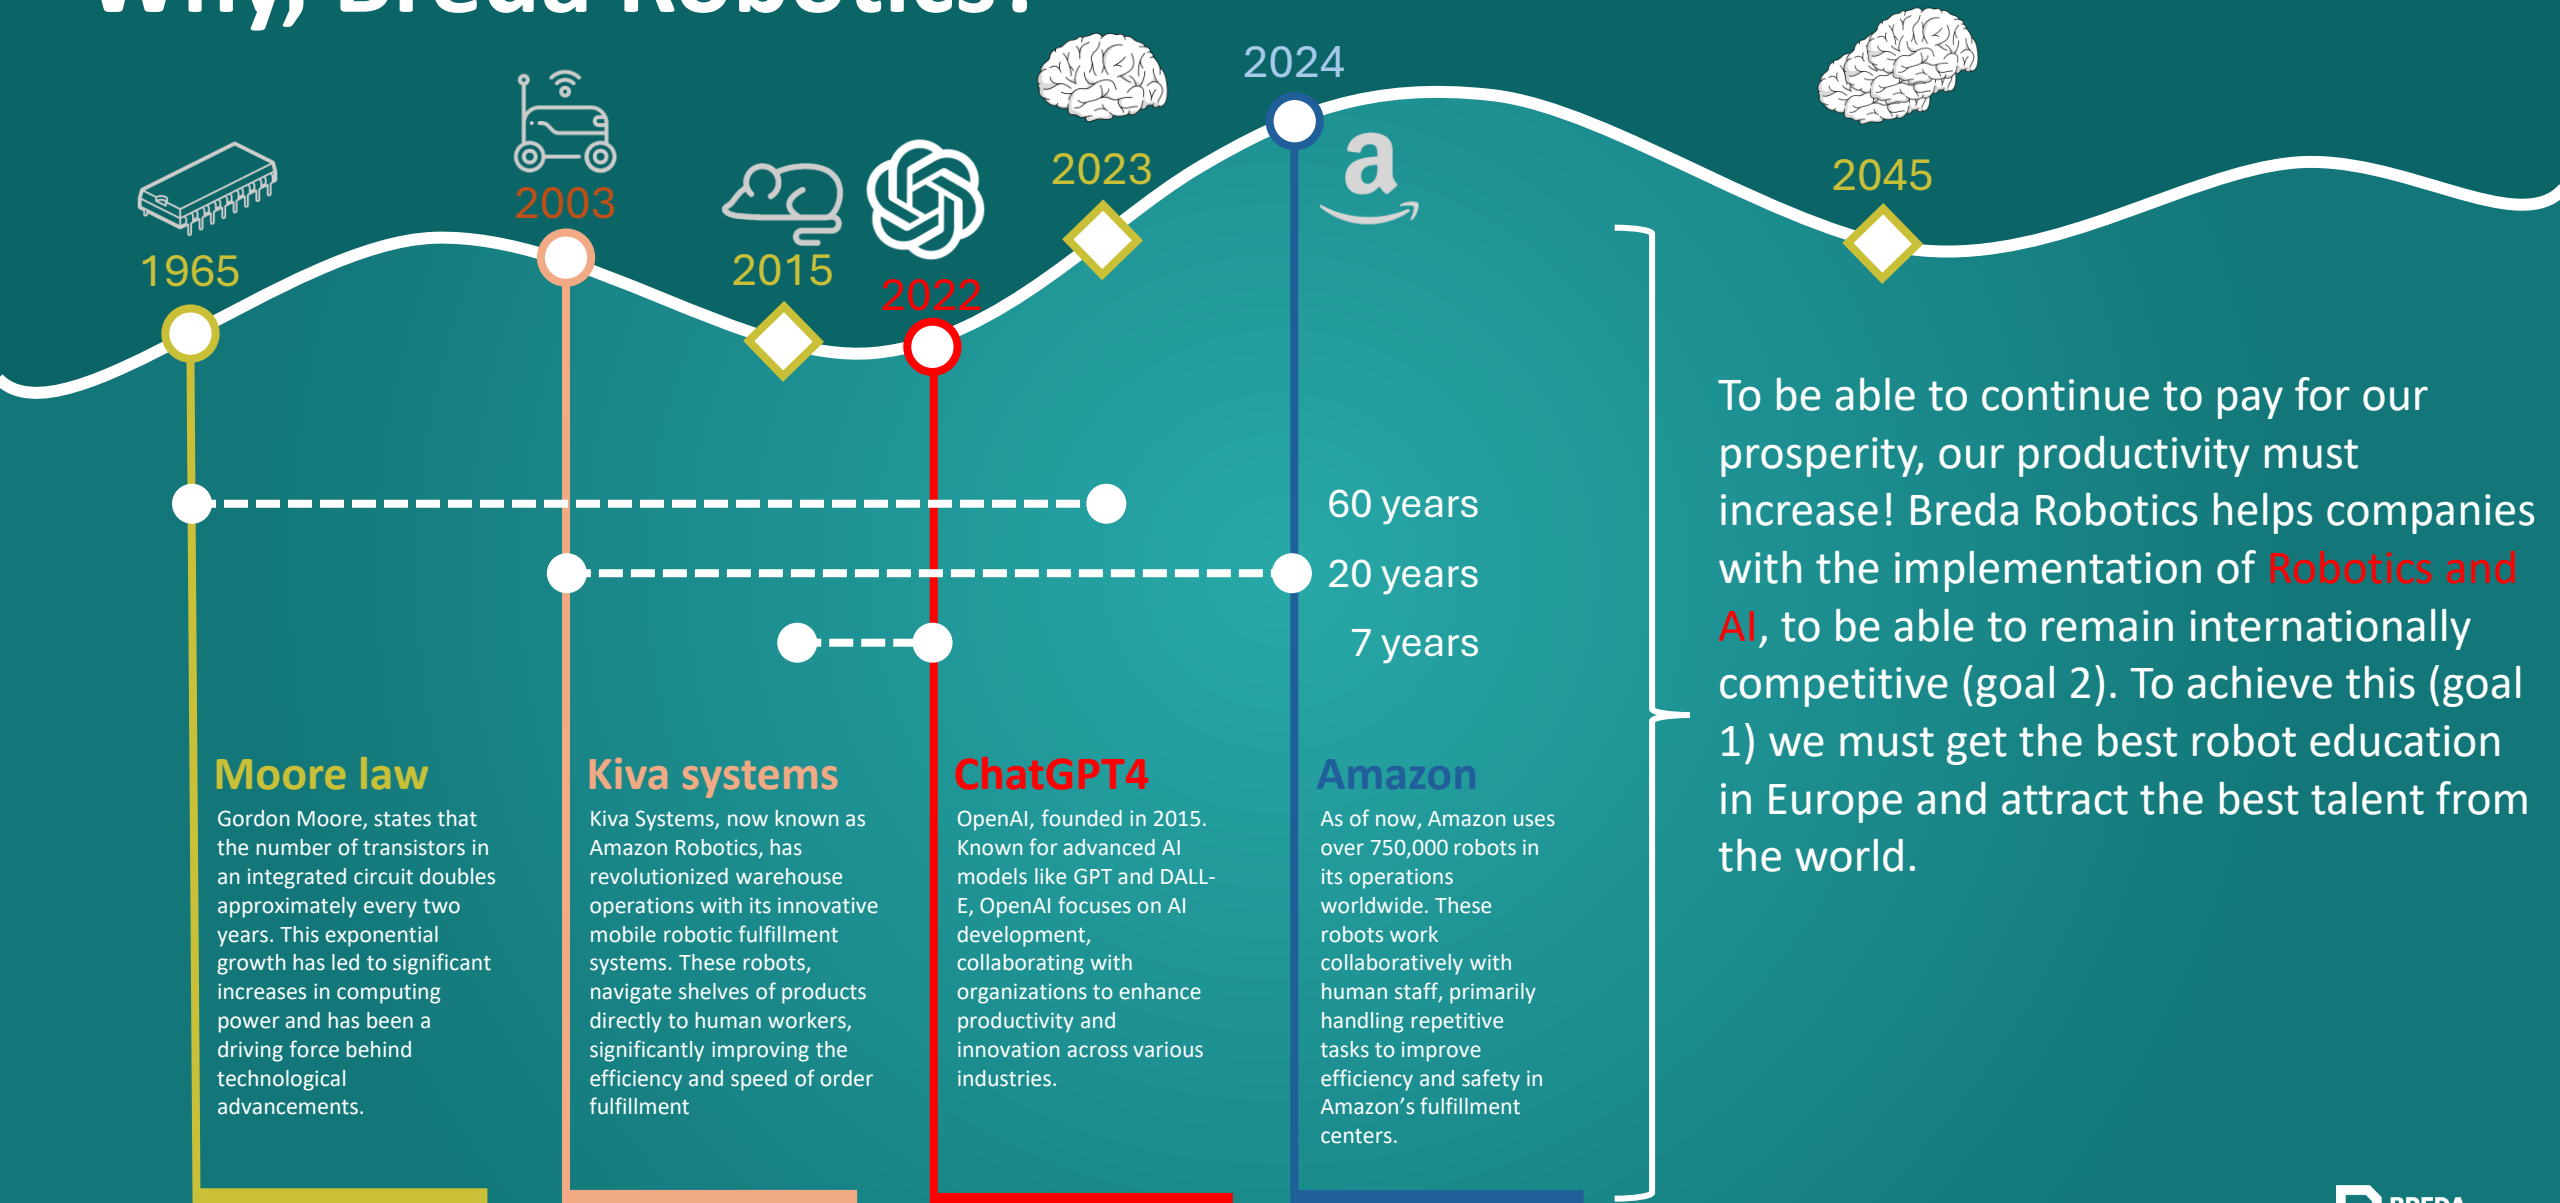

Four stories | Human-machine cooperation

Four stories to predict a Possible Future

Why, Breda Robotics?

The Origin

- Breda Robotics started as a collaborative initiative between robotics companies in West Brabant, aiming to create a hub for innovation and technology. The idea arose during a roundtable discussion in the REWIN program Hightech Maintenance in 2018. The foundation was established in 2019 by six 'founding fathers', including ExRobotics, WWA, Synchron, Avans, the Municipality of Breda, and REWIN
- The goal was to create an incubator where education, companies, and organizations collaborate on the development of robotics and technologies for industry and society..

What we do

1

Connecting

We connect talent to the region

2

Informing

We strengthen the robotics cluster in the Netherlands

3

Inspiring

We encourage the use of robotics, automation, vision, and AI

Our Pillars

Collaborating with a clear vision

Hybrid Learning Environment

Combine education, research & entrepreneurship

Expertise & Experience Center

Exploring Robotics & Learning from Experts

Ecosystem

Interconnection Between Partners, Education, and Talent

New Technology

Committed to Societal Issues

Robot Campus Brabant

The Hub for Robotics, Automation, Vision, and AI

Sectors

Agrifood

Healthcare

Logistics

Maintenance

Construction

Industry

Partners

Integrators & Machine Building

Product Specialist & Supplier

Grippers & EoAT

Software & AI

Vision, Sensing & Navigation

Start-ups

Advice & Service

Government

Challenge Owners

Study Associations

Economic & Strategic Partners

Education & Research Institutions

How are we funded?

Companies (Partners)

Province of Noord-Brabant

Educational Institutions

Subsidy Providers (Interreg
Vlaned, Stimulus)

Municipality of Breda

Development Breda Robotics

Laying the Groundwork

- Development of ecosystem & Robot campus Brabant
- Infrastructure: Team, funding, location, etc
- Connection with Avans, BUAS, Curio & AD
- 40 Commercial members
- Government (Breda, Province NB, Rewin)

Development Breda Robotics

Four steps:

- Laying the Groundwork (Last 5 years).
- Getting Attractive (Years 2024-2028): Focus on enhancing our branding, create one curriculum Robotics for student, support local companies with automation and extent our partner network.
- Scaling Up (after 2028): Expand your operations, attracting top talent, attract international cooperate companies.
- Global Reach (later): Establish a global footprint, form international partnerships, and adapt to global market demands.

Our Projects

To realize the ambition of Breda Robotics, collaboration and starting projects are crucial.

1. Innovation cluster subsidy Municipality of Breda (Municipality of Breda)
2. Ecosystem development and Robot campus Brabant (Province)
3. Project Smart Farming & Food Processing (Interreg-Province-Ministry of EK)
4. Project Art-IE (Interreg-Province-Ministry of EK)
5. COBOTASSIST (Interreg-Province-Ministry of EK)
6. ZorgBOTS (Stimulus/OPZuid)
7. Regional deal – inclusive labor market

Provincie Noord-Brabant

COBOTASSIST

OPZUID

Europees programma voor transitiegedreven innovatie

Interreg SFF&FP

Take on the challenge in the agricultural and food processing industry! Seven innovation trajectories:

1. Optimizing Packaging Line
2. Weeding Without Hands
3. Solar-Powered Work Assistant
4. Flexible Inlay and Packaging
5. Broccoli Processing Line
6. Scarecrow
7. Robotics for Weed Control

Interreg Art-IE

Problem

Statement With Art-IE, Artificial Intelligence Inspiration, we want to focus on digitization and collaboration of knowledge institutions with SMEs.

Reason

SMEs generally lag behind in the use of digitization and robotics. Collaboration with other companies and knowledge institutions is crucial for innovation – SMEs rarely engage in such collaboration.

Interreg COBOTASSIST

Objective Providing

SMEs with knowledge and prototypes for automating/robotizing (post)processing processes.

Development of training modules for education and business.

Development of guidelines for safe working with cobots. Development of demonstration cobot/robot cell.

ZorgBOTS OPZuid

Developing and (virtually) demonstrating a robotic solution for washing patients/clients.

Development and demonstration in practice of a robotic solution for logistical tasks.
